Notes:

Factors should be applied to the deferred compensation including revaluation (where applicable) to the date of early retirement. The amount of revaluation should be determined for the relevant period in a manner consistent with Schedule 7 to the Pensions Act 2004 and associated regulations.

Factors are shown for age exact at date of retirement.

For intermediate ages factors should be obtained by linear interpolation for that Normal Pension Age.

If the relevant Normal Pension Age is not an integer the factors for that Normal Pension Age should be obtained by linear interpolation.

Ages should be determined in complete years and months rounded to the nearest whole month.

Separate factors are available for application to lump sums where the lump sum is a separate entitlement from pension under the scheme.

These factors will be reviewed from time to time and may be changed without notice.

From 31 December 2026 Pre 1997 compensation will increase in payment for some members. Relevant Pre 1997 factors will depend on member circumstances.
